In **1855**, the **second World's Fair opened in Paris**; Response to the British challenge of the World's Fair of **1851**. Presented as the "Exhibition of Agricultural, Industrial and Fine Arts Products", it focuses on fine arts and agriculture, enabling to enhance the many French artists and the wealth of local products, including wine. For Napoleon III, it is a matter of affirming the existence of the **Second Empire**, a young regime faced with European and multi-decadal powers.

In response to the **Crystal Palace**, Napoleon III built the **Palace of Industry**, also designed as a large canopy. Organized in 30 classes divided into 8 groups, the Exhibition welcomes all nations under the same buildings, so as to be able to compare; A formula that will soon give way to separated National Pavilions. The Palais de l'Industrie exhibits industries, textile and chemical products, as well as furnishings in which cabinetmakers are standing out like **Fourdinois**, awarded a **Grand Medal of Honor for an enamelled ebony cabinet**, or **Jeanselme** to whom **Napoleon III purchased a large hunting buffet for his antechamber at the Palace of Saint-Cloud**. The house Tahan also makes sensation with a large aviary which is several times reproduced in the international newspapers, and exhibits unique furniture inlaid with the **porcelain marquetries** of Julien-Nicolas Rivart .

The World's Fair is also the occasion to present small and great inventions which in the long term have led to technical and social revolutions, visible all along the Seine in the **Galerie Annexe des Machines**. In 1855 were presented: the **pendulum of Foucault**, Mr. Loysel's percolator to make coffee flow, and the technique of **galvanoplasty**, which was taken over by the firm **Christofle** for the realization of bronze and will contribute to its success, or the Singer sewing machine that marks the beginning of the modern era of fashion.

Between the Palais de l'Industrie and the Galerie Annexe des Machines, the **Rotonde des Panoramas**, designed as the central pivot of the Exhibition, hosts luxury industries. Finally, 5,000 paintings are presented in a specific building called the **Palace of Fine Arts**. The 1855 World's Fair is a turning point for French painting, which consecrated the **great romantics** and gave a chance to a certain **Gustave Courbet** to make his counter-exhibition with the **Pavilion of Realism**.

The exhibition is a success with 14,000 participants and approximately 5,000 visitors, including **Queen Victoria** at the inauguration, or the **Emir Abd-El-Kader**, a great opponent of the colonization of Algeria, to whom Napoleon III gave freedom. And in a crowd of anonymous, some young still unknown artists are present, such as **Degas**, **Pissarro**. **Renoir** ...
